

Corridor 3.1.0

Update Release

Summary

Version(s) patched:

3.1.0

Date Released:

09/11/2020

Issue Resolution:

- Modifications to the deployment files to upgrade libraries. **Tracking code:** STE-19577
- If your company has installed the Corridor Vendors Matters task to synchronize matter information so vendors can submit manual invoices through the Corridor Website, now if a matter has multiple players that are vendors in Corridor, the matter will synchronize with each vendor in Corridor. **Tracking code:** STE-21210
- The ability to upload a spreadsheet of timekeeper information into Corridor by a vendor has been resolved so that the Vendor ID is now used properly. **Tracking code:** STE-21491
- When selecting a matter to create a new manual invoice, vendors now can only select from matters for the selected eCounsel client. **Tracking code:** STE-21510, STE-21578

Dependencies:

- corridor3.1.0.sp3.1

Install Instructions

1. Stop the Corridor application on the Java application server.
2. Backup the Corridor Web application in the **WebApps** folder on the Java application server. Delete the contents of the Corridor folder in **WebApps** after making a backup.
3. Rename the **corridor3.1.0.sp4.1.war** file to the deployed filename in the **WebApps** folder. Copy the newly named war file to the **WebApps** folder and overwrite the current file contents.
4. Unzip the new war file into the Corridor folder in **WebApps**.
5. From the backed up files for the previous deployment, copy the **WEB-INF\Utilities.properties** file to the same location in the newly exploded war file on the Java application server.
6. Restart the Corridor application on the Java application server.
7. Login to Corridor as an Admin user and verify the settings.
