

Mitratech's PolicyHub: Collaborative Editing Enhancements

Learn all about this powerful new enhancement to PolicyHub.

Let's start 2023 with a bang! Mitratech's PolicyHub, our robust policy and procedure management platform, has been further enhanced with powerful new capabilities.

As a customer of PolicyHub you are aware that within the platform you could send a document for review to multiple people within your organization, but they were not able to visualize the changes that multiple stakeholders were making to the document, in real-time. The only way to visualize changes done by other stakeholders was to move the document through the established workflow.

Many customers followed a chain workflow approach and would send them to individual contributors so that each stakeholder could see what suggestions other contributors had made. Hypothetically speaking, if you gave each individual contributor a week to review the document, make their required changes and you had 40 individual contributors, then the workflow could take up to 40 weeks.

Without a doubt, policy management must be a collaborative effort and organizations should aim to create an environment that enables fully collaborative policy authoring, where multiple people can be working on one policy at the same time.

Introducing PolicyHub's Collaborative Editing Enhancements

In today's day and age there are hundreds of change events coming every business day, enabling your organization with collaborative tech that allows agile revising processes in real-time, rather than in a linear sequence, is key to keeping policies up to date.

Organizations looking to build an agile policy management program search for a collaborative authoring and review environment that enables real-time collaboration. Document check-in and check-out processes that take months are becoming increasingly tedious and ineffective, with continuous risk and regulatory changes happening constantly, it is critical to reduce this turnaround time dramatically

Mitratech's PolicyHub now enables your organization with the capabilities to build collaborative editing features into review and approval workflows, so that multiple stakeholders can review a policy document at the same time and see changes in real-time.

Furthermore, PolicyHub now allows editing of Office documents from within the browser instead of using the desktop version of Office. The capability supports Word, Excel and PowerPoint documents.

Additionally, your PolicyHub inbox is now supported by Android and iOS devices.
