Global Search Connector 1.0 Release Notes

This release notes details the information related to Enhancements, Improvements and Resolved Issues for Global Search Connector 1.0 release.

Enhancements/Improvements

Enhancement: Ability to delete index while index job is running

Description: We have now added the ability to delete indexes while the index job is running.

Enhancement: Feature to remove records tracked under changed records.

Description: This new feature allows the users to remove records tracked under changed records, when UUID is dropped from GlobalSearch Index Tool.

Bug fixes

Issue: Fixed the issue of not showing object filters in Global Search Results.

Tracking Code: SUPPORTPRI-65608

Issue: Fixed the system error that occurs when clicking the 'Apply' button on the empty search results page for global search.

Tracking Code: SUPPORTPRI-54642

Issue: Fixed the issue appearing Elasticsearch times on Teamconnect appear in GMT.

Tracking Code: SUPPORTPRI-49931

Known Issues

Issue: Issues in displaying Post-Modularization status message set as "Indexed", for an object with 0 records.

Tracking Code: TC-49693

Issue: In ElasticSearch, highlighting new display key values such as "Categories Tree Position" regardless of the search key word in an indexed object.

Tracking Code: TC-49399

Issue: Global Search returns strange errors when objects are not indexed.

Tracking Code: TC-49330

Issue: Filters added in Global Search View are not displayed during Global Search in the application. Global Search Filters should be displayed when a user searches for specific objects in Global Search.

Tracking Code: TC-49216

Installation and Configuration Guide

For more information on how to install and configure the Global Search connector module in TeamConnect, refer to the [Link](#).
