Changes in this Release

CMO Compliance Bug Fixes

Web

S. No	ID	Description	Platform	Fix Version
1	CW-30006	When a CMO user imports an Event via the Event import tool, the system assigns an incorrect user as the performer of the event if similar user names are used in the import sheet.	Web	V17, v18
2	CW-30223	When a CMO user tries to clone a Source from the Source module, the system displays an error 500 message. The error is displayed due to actions created against the sources that are deleted while having other actions created against them that are not deleted.	Web	v18
3	CW-30296/ CW-30408	The CMO user is unable to filter any Findings using a multi-select custom field in the Findings Register page when the entered value in the filter contains a forward slash.	Web	V17, v18

Mobile

S. No	ID	Description	Platform	Fix Version
1	CMM-31855	When a user performs an Admin sync, the sync does not go beyond dictionary sync and displays a dictionary sync error.	Android	V17, v18
